1. Introduction

Modern secure development practices focus on minimizing security risks in an application. The Black Duck Polaris® Platform provides an aggregated view of the application risk reported by various Black Duck security analysis tools and normalizes testing results to assess the overall security posture of applications under development.

1.1 Objective

This report presents the results of an application security analysis performed by the Black Duck Polaris® Platform This analysis identifies vulnerable areas in the different components of your application that may be exploited by a malicious user, and estimates the application's protection from common attacks. This report also assesses the overall security risk for your application across all threat areas.

1.2 Scope

The scope of this report is limited to components specific to the applications and projects listed:

Application	Project	Branch
Yoriito vehicle API	vehicle-api	main

2. Executive Summary

CISOs and security executives need to understand and manage their organization's security posture across their application portfolio. They need to identify, prioritize, and resolve critical security vulnerabilities that threaten their organizations. The Black Duck Polaris® Platform addresses these needs by combining the best-of-breed security tools with robust security reporting dashboards to provide cross-tool reporting focused on aggregation, normalization, and correlation.

3. Methodology

The Black Duck Polaris® Platform brings the power of Black Duck software tools together into an integrated, easy-to-use solution that enables security and development teams to build secure, high-quality software faster. The specialized Application Security Testing (AST) tools on the Black Duck Polaris® Platform, each covering specific aspects of the code base, deliver holistic application security coverage when used together.

This report was generated with the following configuration:

- Report created by: tomoko.tsuruta@etas.com
- Severities Included: critical, high, medium, low, informational
- Standard Included: OWASP Web Top Ten 2021
- Severity Modified Included: all
- Test Types: SCA (Package Manager, Signature Analysis, External Analysis)
- Scope: Specific project or branches
